I might skip the book or save it for later. I can get absorbed in software development and also in reading. If I get a neurologist to approve and recommend, I can probably get my adderall upped to 60 mg. I can function much better, including reading. I got a lot of enjoyment out of working on my learning courses website, back in 2020 and 2021. I'd build the components one by one, and while I was at it, I'd be reading books on software development. Once I had learned enough new things to have a significant improvement in my knowledge, I'd rewrite one or more of my components. It was an iterative process, and that's how you master something. You focus on it obsessively, with intensity. You define the system that you are working with. By system, I mean anything. When you are learning anything, you are dealing with a system, in the way that I see things. The system will be compromised of individual elements that behave according to rules. The individual elements are the details, and the system is the sum total of the details and the rules that govern their actions and interrelationships. Within the system, some of the elements may themselves be systems, which are again compromised of small details that work together according to rules.

I can't type any more

---

Warmest Regards,

Clint Williams
