Re: Email for September 5th, 2023

To: "Division, Criminal (CRM)" <Criminal.Division@usdoj.gov>, civil.feedback@usdoj.gov

It really upsets me that these people will not suffer consequences. I know that it is hard to hear the things that I say. At least I imagine it is. I can't help it. I get mean when I think of this sometimes. I can't take a penny less than what I have proposed. The other concern is keeping my evidence, and making more materials if I need to, for my doctors. If I am going to be in the news, I need a hell of a lot more money. Being publicly know, the way that I will be if there is some announcement about this, would absolutely kill me. But I'll make do somehow no matter what. I think a lot about moving to another country. I want to live in a rich country, and Switzerland consistently sticks out as my best option. I mostly don't want to move, because I like my country and I have figured out how to get around and do things here. I get attached to what is familiar and don't like change.

Getting my sleep turned around is proving to be a pain in the ass. I'm going to guzzle some 5 hour energies later on. I got up at 6 pm, and I need to stay up until 3pm to maybe 6pm tomorrow. This moving my sleep around is terrible.

To give my opinion, this bank ought to have to pay no less than \$4 billion to me, and the people involved should be banned from banking forever, at a minimum. The \$4 billion figure I get by the simple logic that this is the worst thing this bank has ever done, and so it should have to pay the largest settlement that it has ever had to pay. CFPB hit them for \$3.7 or \$3.8, so you just round up from there. I've previously said that \$10 billion would be suitably fair, but I would be satisfied with less than that.

Of course, I have proposed less than that, for the sake of the bank being able to hide what they're doing. I would still have done quite well if I get that. People who are empty handed in their fight for justice are very common. If this is known, there are advantages to jacking up the settlement. If the bank is made to pay a multibillion dollar settlement, it would be something where the justice department could defend its actions and not be subject to a charge from the public or congress that this bank is above the law. Figures like \$4 billion, \$7 billion, and these other enormous figures I have thrown around can credibly be said to have a deterring effect.

But it will be what it will be. \$2 million for my friends investigation was going to be easier to swallow if I got money in the billions. I'll still live however. Might end up costing less than \$2 million. I want a big house, not huge, and a bmw 7 series. I'm starting to sort of side with people who are called climate alarmists, and I want to have a small carbon footprint. I'm only human though, and I need some nice things to offset my suffering. I next to never drive anywhere, so my carbon footprint would still be smaller than 99% of people. This is especially if I put solar panels on my house.

My opinion on this climate emergency is that we need to get on it. Our entire capitalist system is at stake. The more the planet is injured by our activities, the more necessary it becomes to rapidly scale down economic activity. We will get to the point that we are between a rock and a hard place, and any option we take will be terrible.

Oil and coal are the perfect energy sources. That's why we've used them for so long. I'd say natural gas is up there too. These types of fuels can power our economy and power technology that is just amazing. I believe in human ingenuity. If we get on the case now, and make a massive investment in developing technology, we can save our economy and the planet. If we wait, our lifeline will be too short, and we will have to rapidly descale our economy and probably never use fossil fuels again. We will lose the possibility, that we likely already have, to fund energy intensive technology development projects, to develop technology that can put the global temperature under our control.

I have recently followed people who are either scientists or who are versed in the science of AGW, and there is science that even having cars is unsustainable and will lead to excessive damage to the environment and mass death down the road. Scientists have come to this conclusion.

If we can artificially offset the greenhouse effect, it would be within our power to initiate a period of global cooling. We could probably find measures to affect precipitation. The problem we face is that the atmosphere is going to destroy our property and cause mass deaths. It is our fault, for pumping CO₂. We have 2 directions to approach this from, and the one with the best outcome is to take control of the atmosphere.

Warmest Regards,

Clint Williams
