Re: Email for December 19th, 2023

To: "Division, Criminal (CRM)" <Criminal.Division@usdoj.gov>, civil.feedback@usdoj.gov

Been working some on one of my software projects. I could have a good time working on my website and other software projects, if I had my adderall upped and if these extreme weather events and other terrible developments related to the climate crisis would cease. It fills me with horror and despair.

I'm working on having my Twitter feed segmented so that I can filter out the climate movement people. I need to know what's happening, but its not good to see it everyday.

I am very hopeful that something good will happen. Technology is the most obvious solution. It is an extremely hard thing to do, to engineer the climate. That's what I've gathered. You risk creating some unpredictable effect in the earths systems. But we've got bright minds all over the place. They can talk to one another. It's like every genius on the planet has an opportunity to talk to every other genius.

The scientists are pushing for a phase out of fossil fuels. I think we need to get that rolling and do technology at the same time. We need to hit this from every angle. We are not being deliberate or thorough in our actions. It's haphazardly bouncing from one thing to the next, with no consistent direction. We are facing the collapse of civilization. It's horrifying me to even type about it.

I can have more sanity and good times, after I filter out this news. I was doing better before I typed about it. My brain is extremely taxed and I'm trying to recover. It may take me hours to do that.

Warmest Regards,

Clint Williams
