Re: Email for December 19th, 2023

To: "Division, Criminal (CRM)" <Criminal.Division@usdoj.gov>, civil.feedback@usdoj.gov

I'm going to cut this one short, for now at least, but what I'm getting at is that the scientists are experts on the earth's systems. They could accelerate the development of technology. If we scale down fossil fuels, while at the same time developing technologies, we would be covered in all scenarios.

If we fail to develop technologies to engineer the climate, then we could continue an energy transition away from fossil fuels. If we do find technologies that work, then we may not have to phase out fossil fuels. We might can ramp them back up. Fossil fuels are like magic, in what they do for humanity as energy sources.

I am concerned about human well-being and the planet. I am worried that saving the latter may involve a reduction in the former. At the same time, saving the latter is a moral imperative the collective of societies around the world. We will retain some measure of the former, if we save the latter.

If I were to get a multibillion dollar settlement out of this fight, I'd give at least \$10 million to countries in the global south. They are paying for a problem that they largely didn't have a role in. I've lived a life that kings of the past never could have dreamed of, because of fossil fuels. I accrue a mountain of benefits, and the price tag gets sent to the global south.

I won't get a multibillion dollar settlement with what I am now trying to work out. I will be glad to help my friend on Twitter, and to help some others too. Then I will have to watch the rest of my money, so that I can live for as long as I need to.

Warmest Regards,

Clint Williams
